Available full-time, onsite in Bengaluru • Jan – Jun 2027

EDUCATION

Indian Institute of Information Technology, Allahabad
B.Tech in Electronics and Communication Engineering
Disha Delphi Public School, Kota
Class 12

CGPA: 7.52
2023 – present
90.2% (CBSE)
2022 – 2023

EXPERIENCE

- **REZO.AI** 🌐 – **Product Engineer Intern** May 2026 – July 2026
Voice AI platform for Indian enterprises; on-prem deployment, sub-800 ms end-to-end voicebot latency Noida
 - **RAG test panel**: Built a developer-facing panel showing the **top-3 retrieved chunks** per query with relevance score, latency and source, flagging sub-threshold chunks (“Would not be used in call”) so builders could validate retrieval before going live.
 - **TTS pronunciation layer**: Built a pre-TTS substitution layer using **O(1) hash-map lookups** to fix mispronounced brand names and domain terms across TTS providers, adding **<1 ms latency**.
 - **Backchannel handling**: Combined **VAD** with a curated Hindi-English acknowledgment lexicon (“hmm”, “okay”, “haan”) to **eliminate false interruptions** on acknowledgments, improving turn-taking.
 - **STT language-detection bug**: **Root-caused** a bug where the STT provider mistranscribed language despite auto-detection being enabled: the detector was never activated and the detected language never reached the system prompt. Fixed both paths.

PROJECTS

- **CP-Dojo** | Next.js, TypeScript, Supabase, Codeforces API, Vercel 🌐 Live 🐙 GitHub
 - Built and shipped a **personalized CP training platform** used by **70+ active Codeforces users**, recommending problems at the edge of each user’s ability instead of random grinding.
 - Built **passwordless auth for a platform with no OAuth**: users verify by submitting a deliberate compile error, checked via the **Codeforces API**.
 - Trained a **logistic-regression model** on users’ Codeforces history to personalize difficulty; switched scoring from an absolute target to a **rank-relative percentile** after live-data testing.
- **Leet-Retention** | React, Supabase, Chrome Extensions API, JavaScript 🐙 GitHub
 - Built a Chrome extension that **reverse-engineers LeetCode’s internal GraphQL API** to auto-sync submissions across **3 verdict types** with zero manual input.
 - Replaced fixed review intervals with a **modified SM-2 spaced-repetition scheduler** driven by submission count and difficulty, so mastered problems stop resurfacing.

ACHIEVEMENTS

- **LeetCode Guardian** (rating **2125**) and **Codeforces Expert** (rating **1680**).
- Ranked **AIR 48 out of 13,000+** participants in the **Goldman Sachs India Hackathon 2026**.
- Led team to **AIR 87** in the **Amazon ML Challenge 2025**.
- **National Semi-Finalist** in **Flipkart Grid 2025**, advancing through multiple technical rounds.
- Led team to **Top 100 nationally** in **Google Solution Challenge 2025**.
- **99.52 percentile** in **JEE Mains 2023** among 1.2M+ candidates.

TECHNICAL SKILLS

- **Languages**: C++, Java, JavaScript, TypeScript, SQL
- **Frameworks**: React.js, Next.js, Node.js, Express.js
- **Databases**: PostgreSQL, MySQL, MongoDB, Supabase
- **Voice AI**: RAG, Pipecat, STT/TTS pipelines, VAD
- **Tools**: Git, Vercel, Chrome Extensions API, REST APIs

POSITIONS OF RESPONSIBILITY

- **Lead Organizer, TEDxIIITA’26**: Led speaker curation and execution for 6 speakers and a 30-person team over one month.
- **Secretary General, IIITA MUN’25**: Led conference execution and logistics for 200+ delegates.
- **Lawn Tennis Team Captain**: Captained the institute team; Silver medal at Inter-IIIT 2024.
